

THE GLEICHEN CALL

VOLUME XXXI NO. 27

GLEICHEN, ALBERTA, WEDNESDAY

SEPTEMBER 21, 1938

SUBSCRIPTION \$2.00 PER YEAR

BLACKFOOT M. D. COUNCILLORS IN REGULAR SESSION

The ninth regular of the council of the Blackfoot M. D. for this year was held in the municipal office with Councillors D. Nelson, J. MacArthur, Lars Larson, and W. W. McAllister present. Councillor Nelson nominated Councillor MacArthur to act in the capacity of chairman during the absence of the Reeve and Deputy Reeve from the meeting. Councillor Nelson was unopposed. Mr. W. W. McAllister withdrew his nomination and Mr. Wheatley took the chair.

The minutes of the previous meeting were adopted. Councillor United was appointed delegate-vestry for the balance of this year. A. Griffen, C.P.R. engineer of Strathmore, advised the secretary that he would be glad to discuss any particular that may arise with the council as a whole or with individual councillors. Mr. Griffen was extend an invitation to meet the council at their next meeting for a general discussion regarding grading, irrigation bridge and culvert.

The meeting granted permission to Harold H. Larson of Standard to transfer irrigation waters from the south west 2-24-23 across the road to the south west 2-24-22. He is to build the ditch, install the culvert and maintain the grade. A statement signed by Mr. Larson and the municipality will be completed for the record.

The members of South Valley school district advised that on the 22nd August their 1938 requisition to the district was increased by \$500. The usual form was signed by Mr. Larson and the appropriate endorsement was forwarded. This was an exceptional demand and provoked some discussion as to the council's ability to meet same. The evidence was clear that the good crop in 1937 had been a success and always always did their best to pay their taxes and it could be expected that collections this fall would be sufficient to take care of the additional amount.

The question of further expenditure in the eradication of locusts was brought up for discussion. It was decided that arrangements should be made to purchase and plant 50 acres of land polluted with oil seed. Planting is to be done this fall, and followed by cultivation in the coming years by methods to be outlined.

The meeting adjourned at 4:30 p.m. on motion of Councillor Nelson.

FAIR SUGGESTIONS FOR CONTROLLING THE INSECT PESTS

At the request of the officials of the Blackfoot Municipality and the Field Crop Control Board, the following giving instructions on insect pest control is published. It is hoped that everyone whom the insects bother will co-operate and attempt to control them.

Continue to spread poison bait in areas where all dead grasshoppers while laying.

Shallow fall cultivation: Loosens surface soil, grasshoppers will not lay eggs in loose soil. Explores eggs on the surface to the sun and wind. See note on fall cultivation.

Deep plowing bury the eggs so that the young hoppers cannot reach the surface. This practice is not recommended where soil drifting is prevalent.

Shallow fall cultivation: Loosens surface soil, grasshoppers will not lay eggs in loose soil. Explores eggs on the surface to the sun and wind. See note on fall cultivation.

Cutworms: pale western. Do not cultivate summerfallow between August 1st and September 15th because cutworms mostly lay eggs in loose soil and soil which both the grasshoppers and cutworms are present, delay fall cultivation until after September 15th.

Wheatstem sawfly: Shallow cultivation of stubble destroys wheatstem sawfly grub which winters over in the base of the wheatstem. This can be done anytime before freezing up.

School Fair Entries Down

The big show is over for another year—that happy event for the kiddies and grow-ups too, to meet in friendly competition with the fruits of their labor: during the year, in garden produce, culinary arts, needle craft, as well as the youngsters work in school.

The hall was well arranged and much credit is due those who made the arrangements which afforded ample room to make a fine display of the exhibits. Much credit is due to Mr. Boyd for his untiring efforts in endeavoring to place the association in the front rank.

While the entries this year were not as large as was anticipated, the quality was perhaps even better than in previous years. Details of the results are not at hand at present but will no doubt be published later.

A little more organization and co-operation in the preparations for the school fair would be a step in the right direction. There is no reason why the Gleichen district should not make the finest showing in the province of Alberta. Improved organization would lead to better prizes. It takes teacher plus pupil plus parent of all competing districts to make this the finest school fair in the province.

The association takes this opportunity of thanking the town for the use of the hall, and also to thank Mr. Gorrell and his staff for their untiring labor in making the school fair a success.

TOURIST DOLLARS SPELL PROSPERITY FOR THE COUNTRY

Tourist dollars are the healthiest spent in any country, declared L. L. Julian, of Ottawa, director of the Canadian tourist bureau, when addressing a recent meeting of the directors of the Alberta Motor Association.

Mr. Julian visited the province while on a tour of western Canada for the purpose of examining the tourist and representatives of provincial governments. Emphasizing the importance of the tourist traffic Mr. Julian said that tourist traffic is important in the development of the country and the purchase of goods. Whether the tourist was a bootblack or a farmer, his benefits from the tourist trade are the truest gauge of the business into Canada, he became a member of the consuming population and a non-resident tax payer, said the tourist chief.

Mr. Julian assessed the need of still continuing Southern highway work, the tourist trade was going to expand in this country. He thought that those responsible for road building in this west were doing a good job with the available funds.

RALPH CONNOR'S GREATEST BOOK TO BE PUBLISHED IN SERIAL FORM

It is seldom that so great a book as Ralph Connor's "Postscript to Adventure" is made available to readers in serial publication. The fact, therefore, that the family Herald and Weekly Star has secured exclusive publishing rights for this book is indeed interesting news.

"Postscript to Adventure" is the last of the series recently published by the Unity Movement. This new publication gives a full explanation of the Unity Movement and copies are available to all citizens desiring them. Simply address your name and address to the Unity Council of Alberta, 432 Lougheed Building, Calgary, and a copy will be mailed to you.

While Western Canada will harvest the wheat crop in the fall, in the east this fall, it may not be realized by many people in this district that the grasshopper plague took a greater toll in bushels of wheat in the west this year than has occurred for many years. Total production of wheat by grasshoppers this year is estimated at ten million bushels, and although this amount sounds large, it is really only a trivial percentage of the total wheat crop of the Canadian crop. The loss, of course, was very important to the individual farmers who suffered total crop destruction. While the governments of Canada have not yet dealt towards fighting the grasshopper plague, naturally much more has yet to be done—larger sums of money will have to be appropriated if this pest is going to be controlled. It is anticipated in some parts that large numbers of grasshoppers were carried into Canada from the United States during heavy wind storms, and it is possible that not only a domestic campaign, but an international campaign will have to be undertaken in the future if the grasshopper scourge is to be beaten.

COMING EVENTS

Oct. 1—Judson W. A. Tea and Sales Brownie Home Cooking in Legion Hall 3 to 6 p.m.

LOU MICHAEL IS NOW LOCAL POTATOE KING

Lou Michael, headmaster of the Lou Michael Pounding Academy went into the potatoe raising business this year with much enthusiasm and as a result of his efforts Mr. W. Brown's record of last year by a mile. The other day Lou presented us with one of the plants produced in his garden and the size of it staggered us. This record beat the second at 100 pounds (three pounds, nine and a half inches about the weight). The circumference and height is twenty one and a half inches and a half inches. Can anybody beat that? If you can bring it around and let us see it.

THE WORLD OF WHEAT

By H. G. L. Stinson, Director of "Crop Testing Plan"

The shadow of "The Four Horsemen" of the Apocalypse is falling upon us. The chargers are being girded, saddled and equipped to spread war, hunger, death and destruction.

Should these evil forces be loosed, then the young men, under flying banners and to the strains of martial music, will march bravely to battle. They will be well equipped with their flesh as they will be well equipped with their steel splinters. They will know the hard choking and blind death from poison gas. They will experience the grim and dry-throated ghastly faces of their enemies before their eyes become piles of torn and shattered flesh and bone. They will see once happy homes turned into mad houses of muck and rubble.

How little children will tell, with pride, of the brave deeds of their gallant soldier fathers, but in quiet places day-old gentle women will mourn the lost men, and we will look to a future shattered and empty of hope.

Finally "The Captains and the Kings depart," there will limp across the land and the country will be in ruins, torn, torn in vain, to reinstate himself in a busy world that somehow has forgotten. Then far comes the aftermath of low prices, "A measure of wheat and a measure of flour," of which the Scriptures tell us.

Yet throughout the ages has ever ruled the clear but unheeded injunction to man—shape the fruits of your toil and of your lands freely with those in need—or suffer war.

How sad, how pathetic, how stupid is all this.

Following factors have tended to raise price: Fear of war in Europe. Reports indicate further Italian crop deterioration. Estimates substantial Dutch import requirements for 1939. Shortage of 1938 and 1939 rains needed for ploughing and sowing in Russia and Balkans. Much Russian wheat infected with wheat bunt. Sharp reduction in Chinese pea exports. Mediterranean olive oil production low.

"PORTS OF CALL" CHANGE OF TIME

The popular radio program "Ports of Call", sponsored by the Alberta Wheat Pool, will be presented from 8 to 8:30 each Sunday evening commencing September 25th.

Be sure and note the change of time. Stations CFAC, Calgary, and CJCA, Edmonton.

Alberta Wheat Pool

TOWN OF GLEICHEN Property For Sale

Lots	Block	Buildings
13 to 15	A	Garage
25 to 27	A	Residence
31 to 33	H	Residence
6 & 7	M	Residence
2	4	Office Building

Schnepf Property, 22 House and barn
Information concerning any of these properties can be obtained at the Town Office.

Tenders for the purchase of the above properties will be received by the Secretary-Treasurer, Town of Gleichen up till noon September 30th, 1938.

Highest or any tender not necessarily accepted.

W. J. PHYTHIAN,
Secretary-Treasurer.

Serving a Great Field

From United Grain Growers' terminal at Port Arthur to that at Vancouver is over 1,800 miles. It is over a thousand miles in a straight line from the most easterly of the Company's elevators to the most westerly one. Its most southerly elevator is 500 miles further south than its most northerly elevator. It is a vast area which is served by this farmers' company. Because of the great area served, it has resources, equipment, organization and information enabling it to give every possible protection to the interests of its farmer customers.

Organized by farmers, owned by farmers, controlled by farmers, this Company's essential purpose is now, as it has always been, to be of service to farmers. The experience of farmers throughout the vast area served proves that this purpose has been carried out throughout the Company's history of more than thirty years.

Deliver your Grain to

Colonization Again

With the recent appearance in this country of Sir Henry Page Croft, Bart., C.M.G., M.P., in the interests of assisted British migration to Western Canada on colonization basis, the question of immigrating to the west on considerable scale, which has lain dormant for some months, has again become an issue.

In view of Sir Henry's analysis of the situation and to get things moving in the west, British immigration to the west is to be expected in the next few years. It is highly probable that a good deal more of the proposals of the committee in England, which seeks British government financial backing, will be heard during the next few months.

With some of the arguments advanced by Sir Henry, and endorsed by Sir George Thompson, president of the C.P.R., and the unringed chairman and president of the Canadian National Railways, there will be little, if any dispute, but whether or not the time is yet ripe for colonization of considerable numbers in the agricultural sections of the prairie provinces from Great Britain or any other country is another question altogether.

More Revenues Needed

Few, if any, will be prepared to contradict Sir Henry's dictum that there is room and a need for a larger population in the prairie provinces, when it is remembered that the railways need more revenue—a point not overlooked by Sir Edward Carson, who in his speech in the House of Commons, in 1911, pointed out that other costly facilities such as highways have been provided for a much greater population than now exists in these provinces.

It will be conceded by almost anyone that the overhead costs of these and other facilities could be divisible among a greater number of occupants of the land. The cost of taxation, freight charges and other expenses would be lowered for all citizens, if it is a sufficient amount of grain in the pursuit of agriculture to meet these assessments and obligations.

Neither will there be any quarrel with the suggestion of Sir Henry and his supporters in this country that it is highly desirable that the lack of population as far as possible be filled by settlers from Great Britain, who in the past have been instrumental in the development of the country which may be regarded as the standard bearers of those ideals which have been adopted, and are being fostered as the lone star of this country's destiny. Again, however, should be added the proviso—"and when the time is ripe."

It is also true, as pointed out by Sir Henry, that many of the best settlers in the west are young and have a long future ahead of them, and good despite this apparent handicap. The inference, however, because this was done in the past "men of character and determination" but without knowledge or experience can make themselves self-sustaining within a two-year period does not take into consideration the complexities that agriculture presents. It is the two-year period when the soil becomes dry and is to be "ticked in the spring" to bring forth bountiful harvests in the fall.

The statement also does not take into consideration the further fact that the great majority of the "tinkers and tailors and soldiers and sailors" who came out by the trainload in the halcyon days, not their descendants, occupy to-day the lands that the prairie originally homesteaded. A very large number of these sold their holdings as soon as possible after they had proved up and many returned to their former avocations in the cities, or took up some other calling elsewhere.

With the necessity to day for securing the soil of the land agent and the settler, the cost of the land agent and the cost of the problem to be faced, with the complex character of the industry itself to day as compared with the ease of culture in the earlier years of settlement, the problem of wresting a living from the soil plus a margin of profit in the days when dust and grasshoppers did not corrupt and when drought did not rob the farmer of the proceeds of his labor, is a very different one.

Greater Stabilization Needed

There are not lacking signs that the scourge of drought is at last passing from the western picture and it appears evident that the rust menace has been licked, but in some sections of the west grasshopper invasions have taken the place of the rust. In the case of the grasshoppers, the extent of the affected area, it is estimated that the insects in the space of three weeks have stolen \$18,000,000 from the pockets of Saskatchewan farmers; and there is no guarantee that the infestation may not be worse next year and cover areas unvisited in 1937.

The grasshoppers are a pest that is better defined and the industry shuns definite signs of emerging from the doldrums which has beset it in recent years. It would seem inadvisable and even unkindly to permit colonization on considerable scale on the part of a large number who are not expected to cope with conditions and who are expected to become self-supporting in two or even in three or four years.

Training Ship Lost

The Hamburg American Line announced it had given up as lost its cadet training ship, Admiral Karpfanger, missing in "Antarctic waters" with a crew of 60 for the last 10 days. The ship was en route, Feb. 5, leaving the South Australian port of Gernheim. It was believed the vessel hit an iceberg.

A large oak tree may have enough leaves to cover two acres, if spread in a carpet.

At the first sniffle

... Quick! use this specialised aid for nose and upper throat when the colds start. Helps prevent many colds!

VICKS VA-TRO-NOL

BM-Better Him
Over-eating isn't considered healthy, but the Duke of Queensbury, "Old Q," was the mightiest eater of the 19th century and lived to be 85. His weight at death was 200 lbs. He had two bodyguards with a map in between, two lunches with a half-hour intermission and five other meals.

Magnitude ("Physics") states that rubbing a wart with pennies will cause the wart to disappear "is a fallacy." Of course, it is. Everyone knows a wart should be rubbed with a gold ring—or is it a horse chestnut!

Japan controls North China in the same sense as the man who has a bear by the tail controls it.

A bee has two kinds of eyes—three small ones, and two enormous ones.

Mildew can be removed from clothing by soaking the garment in buttermilk.

English and French

Differ Widely In Their Mental Attitude Toward Trouble

The French, we know, are a logical and rational people, says Harold Nicolson in BBC Listener. When an Englishman might say that "things look non too well," the French would actually mean that "things look non too well."

The French are about to be the first to make a stand in their defense. Their gloom over the Russo-Japanese dispute (which to many of them and indeed to some political workers in this country) is as deep as the gloom over the future of their country.

The Englishman always has a vague conviction that the worst will not really come to the west. The French, on the other hand, are more logical in their thinking in terms of cause and effect, and is always certain that from evil causes will inevitably result. And our own opinion, which is to say that it is lovely to have over in the West, Kent, strikes them as childish, unphilosophical and slightly irritating.

Han Taste For Libraries

First Lending One Established In Liverpool 189 Years Ago

Liverpool appears to have a taste for libraries. What is claimed to be Europe's first permanent lending library was established in Liverpool 189 years ago. Now the city is the home of a new \$100,000 library, named after its donor, the late Harold E. Cross, who died in 1935.

Cross had a library in Liverpool. The library was designed by Harold A. Dod, architect. It has a reading room block of two floors and an eight-floor stack. The building is air-conditioned. At present it holds 100,000 volumes, mostly in English. Ultimately, its capacity will exceed 750,000 volumes.

Paul Zimmerman of Williamsburg, N.Y., drives a 1929 Chevrolet which has since acquired a Stutz radiator, a De Soto body, Auburn brakes, a Chrysler frame and motor and a Plymouth drive shaft.

Conscience is the voice that tells you not to do something after you have done it.

Do This If You're NERVOUS

Don't take chances on learned advice, which you know nothing about, the common sense. Get more fresh air, sing more, play more, eat more, exercise more. Lydia E. Pinkham's Vegetable Compound is a good laxative. It contains some herbs and roots—such as senna, rhubarb, and senna—plus a large amount of senna, which is a strong laxative. It is a good laxative, but it is not a good laxative.

For over 60 years Lydia E. Pinkham's Compound—It is safe to you.

For World Peace

President Roosevelt Speaks His Real Significance Has

The real significance of President Roosevelt's declaration is that it serves notice upon all the world, upon Asia as well as Europe, that the meaning and spirit of the Monroe Doctrine endures Canada; that President Roosevelt's statement has now said, and in the most uncompromising way, what all of us felt and believed, but which some, in other countries, may not have understood.

Mr. Roosevelt's statement is an even deeper significance. Actually, in its spirit, it means that the United States, in defense of democracy and free institutions, stands with Canada and Britain. No more momentous nor heartening statement has come to the world within the last two decades.

In view of the present state of Europe and Asia's dictatorship, this statement will make a difference. It has been said often that the United States entered the Great War because of the sinking of the Lusitania and the entry of the Central Powers. The United States entered the Great War because of the call of the blood; because of the call of common things, things which the American people hold so dear and have held always, in common with the freedom-loving peoples of the world.

So it would be tomorrow. Let us start again, all the world over, to things which the American people hold so dear and have held always, in common with the freedom-loving peoples of the world.

It would be tomorrow. Let us start again, all the world over, to things which the American people hold so dear and have held always, in common with the freedom-loving peoples of the world.

It would be tomorrow. Let us start again, all the world over, to things which the American people hold so dear and have held always, in common with the freedom-loving peoples of the world.

**Complete Your Home
With Brilliant
ELECTRIC LIGHT
—
Constant-Dependable
POWER
At Low Cost**

Now, you, too, can have the comfort and convenience of Electric Light at low power. Dangerous old-style lamps and lanterns may be discarded, replaced by the brilliant Electric Light in house, barn and building, with any longer! Modernize your home, with the new Electric Light, with Power for many machines . . . the inexpensive Pump attachment supplies water under pressure.

Send for FREE Folder

Learn how simple and easy it is to install a Johnson Chord-Hose Pump. Compact, sturdy and strong, Chord-Hose pumps in capacities from 100 to 500 gallons per minute (500 gallons per minute may be used). They are precision-built for economical, trouble-free operation. Being rated in garage, outbuilding or house, the pump is free from noise and vibration. It will give years of satisfactory service with no attention save for fuel and oil.

CHAPTER III.—Continued

Then down the line he went again, finally to drop behind. No one noticed him; all eyes were straining straight ahead. Hammond moved his head back and forth.

It was deep dark before he picked up a clear trail. He shouted and went on. Again, after a period of search, he called, and for a third and final time, he. He thought he heard a faint answer.

He began to run, as swiftly as his sticky snowshoes would permit. In the distance, a faint, gray smudge appeared. He started away, and went forward. At last, they met, each other. Jeanne bowed, tried to cover her weariness with a smile, meanwhile wiping the welcome, cold moisture of a gloved hand across her face.

"And I lost!" she asked, with an attempt at cheeriness.

"You were." Relief at finding her had brought a certain relief. "Why did you drop out?"

"That trace broke again. I suppose I worked it longer than I thought. Then, when I was through, I couldn't see anybody. And noises seemed to come from all directions."

Hammond scowled, but at her, "I knew damned well that sheep-hound would never make lead dog."

The girl laughed weakly.

"I'm glad I'm not the only one to blame."

Reaction had passed for Hammond; he was only glad he had found her.

"A good lead dog would have been able to pick up the trail," he said.

"Can we reach camp?" he asked.

"We'll have to make our own camp." He looked about him, in the lowering dusk. One chance was as good as another—memory told

him that they had been working for him since the trail had led off to the right. Certainly he should not be far away. "We haven't much to kick about. Everything in the world to eat on that toboggan and there's a sleeping bag for you."

He responded. "It won't be the first time I've piled in with the dogs."

There was a different spirit now; however, he seemed to have only now worked forward, bent against the drive of snow. Going was increasingly difficult; the white, sticky snow had come in a heavy, thick pack for a half a mile. Then, as the snow deepened and came up to his waist, a hour of terrific exertion followed. The world was black now, but Hammond urged her forward.

"I think I see the shore line," he commanded. "Keep going if you can."

"I'll keep going," was her answer study. The search ended within a hundred yards, in low-hung spruce, a rocky shore line, and tumbling snow.

"Look," answered McKenzie. With movement of his eyes he indicated the far-away camp. A

It was a new trek from Fourcross. Men were shouting, and hurrying about, mushing their dogs to the first

"Knock, Knock. Ride the buck up!" "Knock off work early, aren't we?" Hammond snarled, when he poked his head out of the crude shelter.

"Look," answered McKenzie. With movement of his eyes he indicated the far-away camp.

It was a new trek from Fourcross. Men were shouting, and hurrying about, mushing their dogs to the first

"Knock, Knock. Ride the buck up!"

Young ducks were swimming and diving for their safety; there were wings and not a few, as they were the size of first gear, as pheasants and turkeys which must fly to avoid predators.

The spruce needles, meanly sweeping near-surface snow, were a constant plague. In that short lead, Hammond must of woodsmanship; he knew that she was searching for a birch tree and its infamable bark, but there was none.

The spruce needles cracked into a feeble mass as the wind whirled and snarled madly. Jeanne handed him a crushed bunch of fine dead twigs. Then he took the larger fuel from her, stick by stick, until the blaze leapt high. At last he straightened and looked down at her.

"You're pretty game, aren't you?" he asked.

He seemed to electrify her. An almost tomboyish expression came into her eyes. She laughed, her white teeth gleaming in the firelight.

"Honestly, am I?" she queried. There was a wish in her voice—for him to tell her again. But she added quickly, "I know I can cook something that's fit to eat."

It was. With the dogs snarling over their fish and mush, the man and woman sat beside the campfire long after the meal was finished.

At last, Jack untied her sleep bag and bedded it down with a canvas windbreak. They sat up late. Hammond went back to the fire. He sat there a long time. Finally he rose and moving toward her, her faintly outlined form, he said, "Jeanne," he said quietly, "are you asleep?"

The voice sounded dull, fatigued. "Yes, Mr. Hammond."

"My name's Jack."

"'Oh,' came with an air of surprise. "Listen," he cut in. "I've just thought of something funny. You're not—"

"What I mean," he added hastily, "is that I'm not trying to but in or ask questions. You understand that, don't you?"

"Just the same," the man went on. "I've thought of something funny. Suppose, for instance, I lent you a little money—you know, to build a cabin, or something like that. I'm telling her exclamation—suppose I did what I could to get things going for you. I've just been thinking that it really would be a what-a of a joke if you'd never take this bunch of engineers that were being dragged through for me, and really start that grocery store."

Five minutes later, Jack Hammond turned away, with a hand at his mouth. "I don't think she's crazy about it," he mumbled, once more back at the fire. He sat there a long time. Then at last he stretched, went over to the dogs, disengaged them with a movement, and said, "I'm going to sleep."

The sun shone the next morning. They were back at camp in an hour. The endless journey began again.

Six days later, a struggling mass

of humans slipped and slid across the hummocky ice of the Lillooet river. Hammond came along, passed Jeanne Towers, asked a cheery question, and went onward.

CHAPTER IV.

Hammond, still clothed amazement by the trail, sat at the fire. He had come in a moccasin boot with buckles with boulders and stony soil and signed to McKenzie Joe to raise and dump it. Joe obeyed, lifting the rough hand of the man who had come in a moccasin boot with buckles with boulders and stony soil and signed to McKenzie Joe to raise and dump it. He was a beaverlike man of huge shoulders and stocky frame; with a great effort he carried the bucket away and emptied it. Returning he called out.

"'Knock, Knock. Ride the buck up!'" Hammond scolded. "Keep going, if you can."

"I'll keep going," was her answer study. The search ended within a hundred yards, in low-hung spruce, a rocky shore line, and tumbling snow.

"Look," answered McKenzie. With movement of his eyes he indicated the far-away camp. A

I'm telling her exclamation—suppose I did what I could to get things going for you. I've just been thinking that it really would be a what-a of a joke if you'd never take this bunch of engineers that were being dragged through for me, and really start that grocery store."

Five minutes later, Jack Hammond turned away, with a hand at his mouth. "I don't think she's crazy about it," he mumbled, once more back at the fire. He sat there a long time. Then at last he stretched, went over to the dogs, disengaged them with a movement, and said, "I'm going to sleep."

The sun shone the next morning. They were back at camp in an hour. The endless journey began again.

Six days later, a struggling mass

of humans slipped and slid across the hummocky ice of the Lillooet river. Hammond came along, passed Jeanne Towers, asked a cheery question, and went onward.

"I'll keep going," was her answer study. The search ended within a hundred yards, in low-hung spruce, a rocky shore line, and tumbling snow.

"Look," answered McKenzie. With movement of his eyes he indicated the far-away camp. A

It was. With the dogs snarling over their fish and mush, the man and woman sat beside the campfire long after the meal was finished.

At last, Jack untied her sleep bag and bedded it down with a canvas windbreak. They sat up late. Hammond went back to the fire. He sat there a long time. Finally he rose and moving toward her, her faintly outlined form, he said, "Jeanne," he said quietly, "are you asleep?"

The voice sounded dull, fatigued. "Yes, Mr. Hammond."

"My name's Jack."

"'Oh,' came with an air of surprise. "Listen," he cut in. "I've just thought of something funny. You're not—"

"What I mean," he added hastily, "is that I'm not trying to but in or ask questions. You understand that, don't you?"

"Just the same," the man went on. "I've thought of something funny. Suppose, for instance, I lent you a little money—you know, to build

... EAST!"

The Eastern Industrial Worker is one of the West's Best Customers

The tearful cow will have lots of company on its long trek East: 175,704 other head of cattle for instance, 21,144 calves and 41,557 hogs — these figures representing Eastern consumption of Western livestock in 1936. Besides these huge shipments on the hoof, Eastern industry consumed more than 80,000 tons of Western fresh dressed meat; 10,000 tons of butter, 6,000,000 pounds of poultry and over 50,000,000 eggs; the whole bringing

Redemption may be effected by payment of all arrears of taxes and costs at any time prior to the sale.

Dated at Gleichen, Alberta, this 29th day of July, 1938.

W. J. PHYTHIAN,
Secretary-Treasurer.

HIGH OR LOW GRADE HONEY
(Experimental Farms Notes)

Honey, to the chemist, is essentially a highly concentrated sugar solution. To the consumer, honey is a delicious food direct from nature. It contains, besides the highly nutritive sugars, many other ele-

ments essential to the human body.

Since most honey is marketed in the extracted form, unchanged, in composition, it is of many different shades of color, and has a great variety of flavors. Honey is a very immature commodity, depending to a certain extent, on the weather conditions during the nectar gathering period. The length of time the honey is allowed to stand before being extracted has also a great influence on the density, therefore, the sugars should not be removed for extracting until the combs are at least three weeks old.

Great care should be taken to avoid the honey becoming spoiled in any way. This may happen by the absorption of moisture from the air, so that the drier the honey house the better. Steam should not be allowed to escape into the air of the extracting room and the windows should be kept closed during damp or rainy weather. Even capped or comb honey in a damp place will absorb moisture and spoil.

Honey should be heated only sufficiently to facilitate straining, if, indeed heating is necessary. The volatile oils which are present in honey are extremely sensitive to heat. If these oils, which give honey its fine aroma and flavor, are overheated, excessive heat should be avoided.

The texture of granulated honey is due to the way it is treated while in the liquid state. Granulation is retarded by heating and the quicker the heating the more uniformly smooth the final product. Therefore, after extracting, honey should be heated only slightly. Cleanliness in handling honey cannot be emphasized too much. Honey rapidly deteriorates under careless handling so that he is getting a quality product only the carelessness of the producer can give him honey at its

best. The delightful flavor and aroma of fresh honey should accompany it to the consumer's table. The applier who aims to do this will produce high quality honey. — A. Stephen, of the Bee Division, Dominion Department of Agriculture.

Town & District

As a passing train was pulling out of Gleichen Sunday morning, an axel on the engine broke. The engineer promptly brought the train to a halt and no damage was done. However, the train was delayed for an hour or more until another engine arrived. During the day a staff of repairmen arrived from Calgary with a derrick and fixed the engine up so that it could be taken to the shops for repair.

Mrs. Irvine, a former resident of Gleichen, died in Saskatchewan during the week end. The remains passed here on the early morning train Monday en route to Edmonton for burial. Many Gleichen people will remember Mrs. Irvine as she lived in town for some months, a year or two ago, while her husband worked with the staff of the C.P.R. at Lethbridge. Mr. Irvine, a former engineer, had acted as secretary for the local branch of the Union

There will likely be a super abundance of grasshoppers in town next year, judging by the large number of nymphs reported to be found on the streets and in gardens. Those who have hoppers jumping around the pants, steel, paint, glass, chemical and other industries — on the payroll; puts them all in a position to buy more of your goods.
